

# timber fin

## Data

The demand for a truly sustainable sign system has been so great that we have developed the incredibly environmentally friendly timber fin.

Laminated from commercial grade off-cuts of western red cedar, timber fin is extremely durable and a natural alternative to aluminium. Supplied from a sustainable source and meeting class 1 requirements, the rich warm colour and texture of cedar makes an individual architectural statement that blends harmoniously with the environment.

timber fin can be supplied in either monolith or twin post format, supporting individual letters or toughened glass panels. Characters can be routed into the profile with the finish left untreated to weather an attractive silver grey patina or protected with pigmented finishes.

Available initially in profile widths of 290mm or 580mm wide and any length up to 3 metres. Profiles can be machined with rebates to cable manage LED lettering.
