AskCody®

Meeting+™

Redefining the booking experience in Outlook and Office365

What if you only needed one app to book and manage meetings, catering, additional meeting room equipment, cars, or other resources? All integrated into your Outlook Calendar and available on multiple devices through OWA?

The all-new AskCody Meeting+ app gives you just that, providing you with the flexibility you need in a modern workplace.

Meeting+™

Book meetings and catering in a few easy steps! Save time. Plan more effectively. Reschedule or cancel without worrying. Meeting+ is taking the booking experience to a whole new level. All integrated into Outlook.

The old way of ordering refreshments or additional meeting room equipment like AV or workstations for a meeting is cumbersome, time-consuming, difficult to administer, and error-prone. With Meeting+ you simply book what you want from Outlook on your desktop, laptop, tablet, or phone, and the kitchen and canteen management, the AV provider, or facility management knows exactly what, when, and where you need it.

Integrated across all Outlook platforms

Outlook, Outlook Web App, or OWA for Devices. The Meeting+ app works seamlessly across all platforms, making it easy for you to book meeting and meeting resources just the way you want. Now you only need one app to handle everything.

Get started fast. Implementation for your entire organization across all platforms in just 5 clicks.

Meeting+ is a mail app for Outlook. Deployment is simple and straight forward. Implementation can be completed for all employees in just seconds.

Additional resources follow your meeting

Meetings are cancelled, rescheduled, postponed, or relocated all the time. That's why all the assigned resources like catering, AV and telepresence, meeting room equipment, table arrangement and more, follow the meeting if it is rescheduled. And if a meeting is cancelled, the assigned resources will be released automatically. The kitchen or the AV provider will also be notified immediately.

The data you need, when you need it

Your IT department will love the ease-of-use associated with the data export in the AskCody Meeting+ Manager. Data is simply exported to incorporate with accounting, databases, and ERP.

Not just an Outlook app. There's a complete management backend behind making the experience more efficient and effective than ever.

Use the AskCody Meeting+ Manager to manage additional resources, workflows, items, bookings of corporate kitchens and canteens, and accept or reject bookings. Kitchen and facility managers can tell at a glance what they need and how many people need meeting service, as well as the location of the service. Now they have an instant one-stop interface with a updated overview in real time.

Why **Meeting+?**

- ❯ An integrated booking experience for both employees and resource providers

- ❯ Integrated into Outlook as a mail app, making usage and deployment easier than ever

- ❯ All additional resources follow your meeting. Rearrange or relocate without worrying. The provider is instantly notified.

- ❯ Manage all your additional meeting resources yourself. Menus, workstations, vehicles, refreshments. It's all up to you.

- ❯ The data you need, when you need it. It's your data. Export, print, and share what you want, when you want.

Integrates with leading calendar systems:
