AskCody® - A modular and scalable digital wayfinding concept and platform that's connecting People with Places and Events – Dynamically!

AskCody provides a simple yet scalable, comprehensive and consistent digital signage and wayfinding solution across multiple platforms. This allows the client to manage information in one place and scale as needed.

The key to a great overall digital solution is to present the right information at the right time. Therefore AskCody's flexible platform provides different means depending on the place and context of the information that is provided.

- Once a person is ready to navigate through the building, their personal smartphone is a much better tool for ensuring that they get to the right place at the right time. AskCody QR-codes, NFC tags and BLE Beacons on SmartMaps™ are placed strategically at each entrance and junction inside the facility.

- Interactive kiosk solutions provide information and wayfinding at a general level. Improving hospitality, self-service and visitor satisfaction.

- A Virtual Receptionist and visitor management system improves guest registration by logging and automatically notifying the host via text that their guest has arrived. Optimising time and ressources for front desk employees. Improves security and access to visitor history.

- Dynamic bulletin boards and ActivityViews provide general nformation about meetings and events and are automatically updated by calendar integration. Show what, when and where making it easy for everyone to find their way to the right location. Makes it easy for visitors to find out where their event take place.

- Finally, as visitors approach a specific room, the dynamic door sign reaffirms that they have made it to the right room for the right meeting or event.

- **The result:** Creating great visitor satisfaction while improving overall staff productivity.

See how it's all connected and placed strategically across you facility to create a great wayfinding experience
