

1. INTRODUCTION

As an organisation, we're committed to sustainability and responding to the climate emergency by playing a key role in delivering on the UK's pledge to achieve Net Zero by 2030.

That means taking steps to evaluate our carbon output and making the changes that will reduce, offset and, ultimately, eliminate our carbon emissions. In doing so, we'll become a more socially responsible and sustainable company and set a standard within an industry that has a clear part to play in reducing its impact on the planet.

The Signbox sustainability journey will see us continue to re-evaluate and transform ourselves, our processes, and the materials we use, implementing sustainable alternatives wherever possible.

We will build a sustainable and ethical supply chain and work with those who share our vision to research, trial and champion innovative low carbon materials and solutions.

2. POLICY

It is our policy to:

- Become more energy efficient by reducing our consumption of energy, water and natural resources and travelling less.
- Generate less waste through prevention, re-use and recycling where possible.
- Dispose of waste safely and legally.
- Avoid the use of hazardous materials, wherever practical.
- Work with environmentally responsible suppliers.
- Prevent environmental damage and minimise nuisance factors, such as noise and air pollution.
- Continue to invest in renewable technology such as our solar panel roof and our electric vehicle fleet.

This environmental policy will be reviewed regularly and updated to take account of organisational priorities and changes, environmental legislation and best practice.
